

Roland VersaCUT 44", 68", 100" Manual Print Trimmers
Roland VersaCUT CR 48", 72" Crank-Assisted Print Trimmers

THE PERFECT FINISH

Trimming prints on flexible or rigid materials has never been so easy, precise, or affordable.

Affordably priced, the VersaCUT from Roland is the industry's only line of print trimmers engineered specifically for production graphics shops, bridging the gap between hand units and fully mechanized trimmers. With VersaCUT, you can quickly and easily trim printed graphics for precision results.

Custom Built for Your Roland Business

The VersaCUT is the industry's only print trimmer line that addresses the unique needs of sign shops. Lightweight aluminum construction enables portability while stainless steel reinforcements provide the durability, stability and resistance to rust and corrosion needed for long-term performance. Easy storage and maintenance make VersaCUT a great addition to your production environment.

Choose from Two Models

VersaCUT is offered in two models. The VersaCUT manual trimmer is available in 1020mm (44"), 1730mm (68") and 2540mm (100") widths. An optional stand that features a roll holder to support printed graphics is available. The more powerful crank-assisted VersaCUT CR is offered in 1220mm (48") and 1830mm (72") widths and is easily bolted or clamped to tables, benches or other common work areas.

Cuts a Wide Range of Substrates

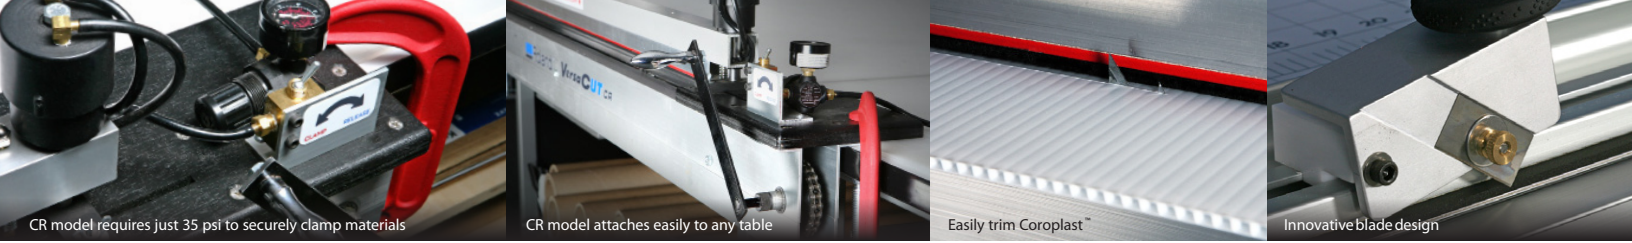

VersaCUT produces perfect, repeatable cuts on a wide variety of materials including vinyl, paper, Coroplast™, foamboard, Gatorfoam™ and Sintra™. The VersaCUT manual trimmer cuts materials up to 9.5mm (3/8") thick and the VersaCUT CR crank assisted trimmer cuts substrates up to 12.7mm (1/2") thick. Both trimmers are designed to transition easily between flexible and rigid substrates.

Easy to Operate

VersaCUT provides the power and precision you need without the complexity or added cost of a motorized unit. The VersaCUT CR crank assisted model requires just 35 psi of compressed air to power through the thickest substrates. Both models operate without electricity.

Convenient Blade Holder Design

The VersaCUT base model features a single blade holder. For the VersaCUT CR, a dual blade holder comes standard and a single blade holder is available as an option. Both blade holders are designed for safe handling and blades are easy to change.

CR model requires just 35 psi to securely clamp materials

CR model attaches easily to any table

Easily trim Coroplast™

Innovative blade design

The New Roland VersaCUT Series Print Trimmers

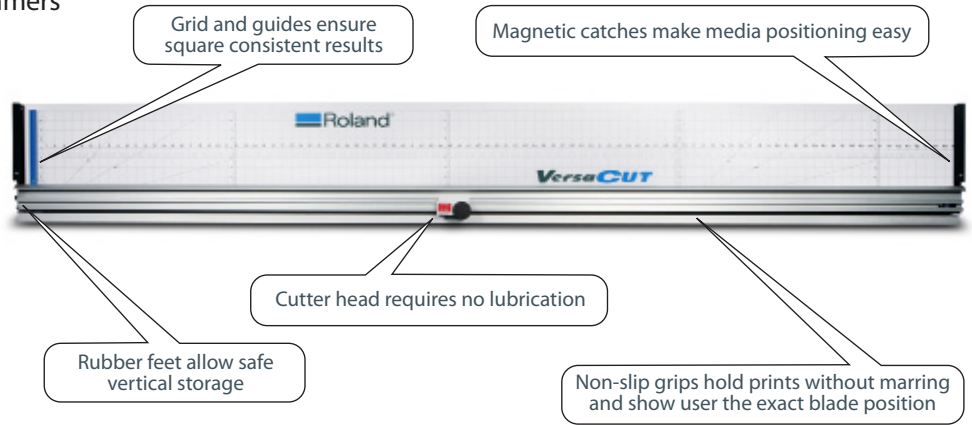

The new VersaCUT series from Roland DG is the best designed print trimmer line for the sign industry. Incorporating many innovative features, VersaCUT trimmers are easy to use and cost effective, allowing sign, screenprinting and print-for-pay shops to stop wasting time and resources on hand cutting.

VersaCUT

manual print trimmers

Features designed for graphics professionals

- Available in 3 sizes - 44", 68" 100"
- Cuts substrates up to 3/8"
- Transitions from rigid to flexible substrates with no change in setup
- Blade position is easy to see, so you know exactly where the cut will be placed
- Precise alignment and grid ensure square, consistent cuts
- Easily cuts Coroplast™, Gatorfoam™ and even Sintra™
- Inexpensive, quick change blades

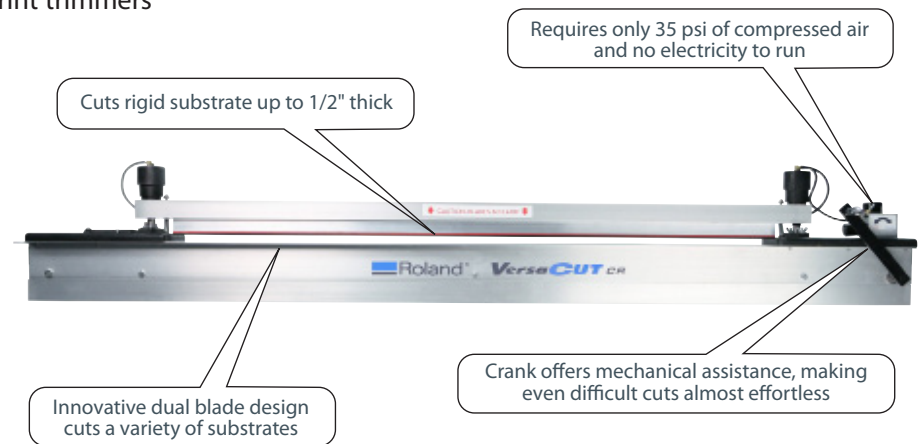

VersaCUT CR

crank operated print trimmers

A cost effective solution for trimming mounted prints

- Available in 48" and 72" sizes
- Easily cuts Coroplast™, Gatorfoam™ and even Sintra™ up to 1/2"
- Portable - can be bolted or clamped to any work table
- Best for shops producing high volumes of mounted graphics
- Simpler, lower cost and easier to use than a wall trimmer
- Durable industrial components for trouble-free service
- Optional single blade holder available for higher speed cutting of soft materials like foamboard and thinner Coroplast™
